

Durasyn 145 polyalphaolefin is a fully synthesized distilled and hydrogenated hydrocarbon base fluid produced from linear alphaolefin feed stocks. Its engineered physical and performance properties are designed to extend the service life and enhance the performance of fully formulated lubricants operating under continuous low, high, or wide temperature range conditions.

Prospective Applications

- Automotive engine oil and transmission fluid
- Industrial gear oil
- Compressor and turbine oils

Compatibility

Durasyn 145 has been engineered to be either near or direct substitutes for existing PAO base oils and premium quality mineral oils. Compatibility with metals, elastomers, coatings, and sealants is similar to fully synthesized PAO base oils. Solubility also closely matches other fully synthesized hydrocarbon base oils.
